WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

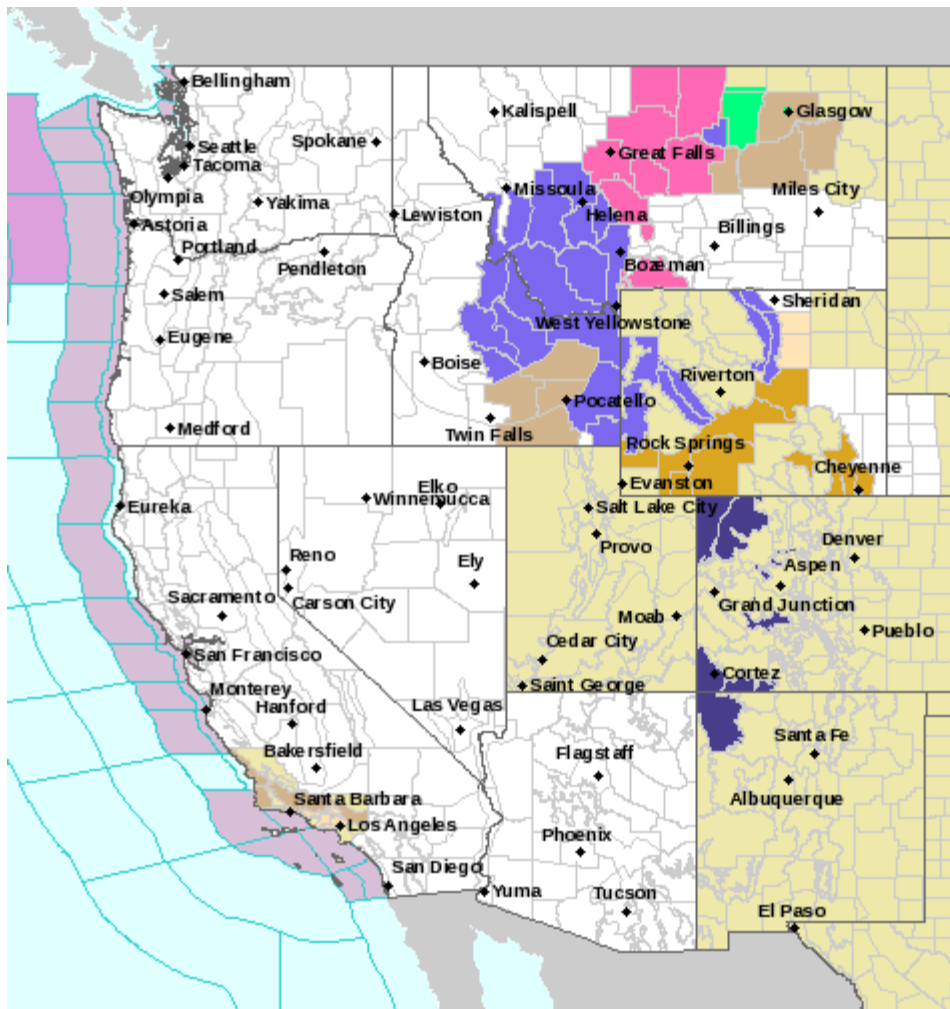

North-northeast/offshore winds gusting to 30 mph and very low relative humidity from the western Sierra slopes to the coast Thursday-Saturday. The cool, wet and breezy weather will continue today. Snow levels will lift to 6,000 feet in the north and 7,000 feet in the south this afternoon. On Tuesday and Wednesday, northern and northeastern areas will still be mostly cloudy with occasional light rain showers while the remainder of Northern California gradually warms up under partly cloudy to mostly sunny skies. Rainfall totals between now and when the last shower ends late on Wednesday will be less than 0.25 inches, except in far Northwest California where an additional half inch is possible. High pressure will build in from the west beginning Thursday and continue through Saturday, producing a warming and drying trend with occasionally gusty north to northeast down slope winds gusting to 30 mph from the western Sierra to the coast. This pattern will rapidly dry out fuels. Many of the areas that will be affected by these winds are only seeing light amounts of precipitation with the current system, so these areas will return to higher fire potential by late this week. By Sunday another incoming low pressure trough will turn winds back to southwest-west/onshore, but precipitation is not expected before the middle of next week.

SOUTHERN CALIFORNIA

Strong and gusty northwest winds across the Santa Ynez Mountains and the Tehachapi Range today, diminishing Tuesday. The trough that moved through Northern California yesterday is now over northern Utah. In the wake of this system, cool and locally windy conditions can be expected over Southern California today. Daytime highs will be in the mid-50's to mid-60's in the mountains with upper 60's to upper 70's in the valleys. Northwest winds of 15-30 mph can be expected across the Santa Ynez Mountains eastward into the I-5 Corridor region, as well as over the Tehachapi Range. Elsewhere, winds will be westerly 10 to 20 mph and locally stronger through the desert passes. There will be a slight chance of light showers north of a line from Monterey to Yosemite through this evening with dry weather elsewhere. After today, temperatures will start to increase and winds will diminish, except it will still be windy over the Santa Ynez Mountains and the Tehachapi Range on Tuesday. A more dramatic warming trend is expected during the latter half of the work week as high pressure begins to build into the area. By Thursday morning, surface high pressure will build into the Great Basin with gusty offshore winds developing across Southern California Thursday and Friday. At this time, winds associated with this next Santa Ana look weak to locally moderate. The warm, dry weather will continue into the weekend with light offshore flow expected.
